Maximum Marks	2 Marks

Customer Problem Statement Template:

To define the core problems travellers, hotel receptionists and administrators face when searching for, booking and managing hotel rooms online, and use those insights to guide the development of HotelPro.

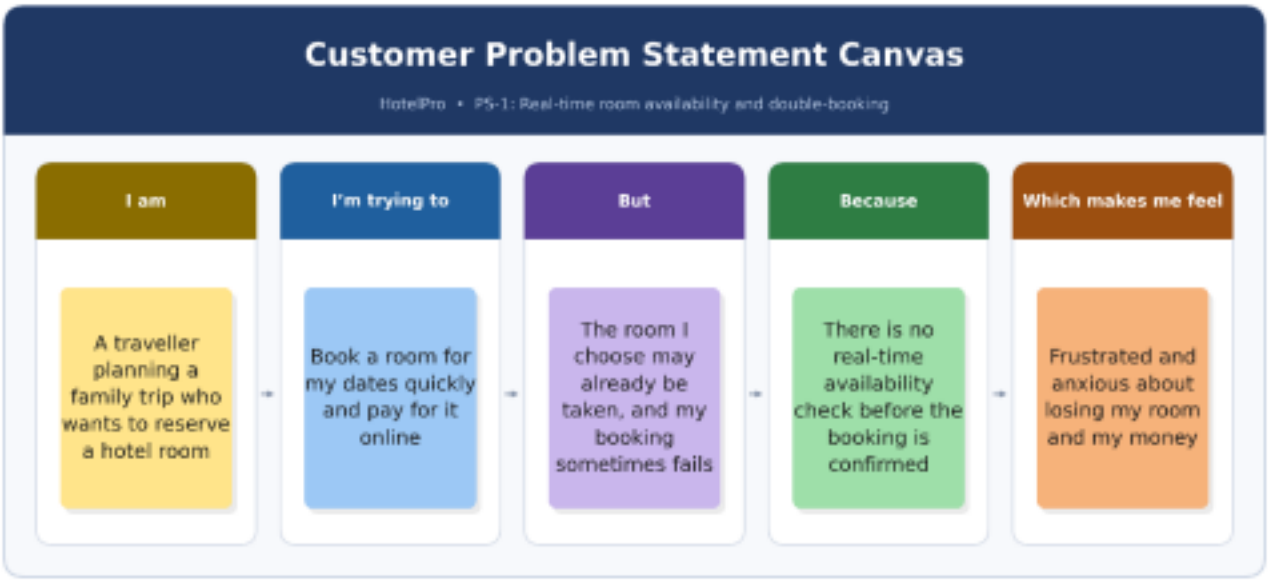

Figure 1 – Customer problem statement canvas for PS-1 (traveller booking a room)

Problem Statements

PS-1	a traveller planning a family trip	book a hotel room for my dates and pay online	the room I choose may already be taken and my booking sometimes fails	there is no real-time availability check before the booking is confirmed	frustrated and anxious about losing my room and my money.
PS-2	a customer looking for a hotel in a new city	find suitable hotels and rooms by city, dates, price and room type in one place	I have to compare several websites and cannot easily filter the results	listings are scattered and search and filter options are weak	annoyed and that I am wasting time.
PS-3	a customer whose travel plans have changed	cancel or modify my booking and know the status of my payment or refund	the cancellation rules and refund status are unclear	policies are hidden and payments and refunds are not tracked	worried and unsure whether I can trust the service.
PS-4	a hotel receptionist handling arrivals and departures	check guests in and out and keep accurate guest records	I rely on paper registers and room status is not updated on time	bookings, guest details and room status are not linked in one system	stressed and prone to errors at the front desk.
PS-5	a hotel administrator managing rooms and rates	keep hotel details, room types, prices and room status up to date	rooms are sometimes shown as available when they are occupied or under maintenance	inventory is managed manually and there is no central management tool	worried about lost revenue and unhappy guests.

PS-6 a platform administrator	monitor bookings, payments, users and revenue	data is spread out and difficult to review	there is no central dashboard or role-based access to reports	overwhelmed and slow to respond to problems.
