IDEATION PHASE

HotelPro – Hotel Room Booking and Management System

Date	12-10-2026
Team ID	SWUID2026403484
Project Name	HotelPro – Hotel Room Booking and Management System
Maximum Marks	4 Marks

Empathy Map Canvas:

Understand the needs, frustrations and behaviours of travellers and hotel guests (customers) who want to search for rooms, book, pay and manage their stay quickly through a platform like HotelPro.

GOAL

- Find a suitable hotel room for my dates, book it without the risk of double booking, pay securely online and receive a clear confirmation.

What do they need to DO?

- Register or log in securely to my account
- Search rooms by city, check-in and check-out dates and number of guests
- Filter and sort results by price, room type, amenities and rating
- View room details (price per night, capacity, amenities) and book an available room
- Pay online through the payment gateway and receive a booking confirmation and receipt
- View my bookings, and cancel or change dates if my plans change

What do they HEAR?

- Friends and online ratings say which hotels are worth staying at
- Good rooms get booked fast during holidays and peak season
- Other travellers complain about last-minute charges and slow refunds
- Hotels advertise room types and amenities such as WiFi, parking and pool
- Reception asks for my booking ID when I arrive

What do they SAY?

- "Show me only the rooms that are really available for my dates."
- "Don't confirm my booking until my payment goes through."
- "Tell me the total price, including taxes, before I pay." • "If my plans change, I want to cancel and know about my refund."

What do they THINK and FEEL?

PAINS

- A room shown as available but already booked; fear of double booking
- Total price changing with taxes at the last step • Payment failing or booking not confirmed after paying
- Unclear cancellation policy and refund status • Comparing several websites and losing track of booking details

GAINS

- Only available rooms shown for the selected dates, re-checked at confirmation
- Booking summary with the total calculated per night including taxes
- Booking confirmed only after successful payment, with a receipt
- All bookings in one place with cancel and modify options
- Secure JWT login; card details are never stored on the platform

What do they DO?

- Searches hotels and rooms in a city for specific dates and guests
- Compares price, room type, capacity and amenities across options
- Enters guest details and books the selected room
- Pays by card, UPI or net banking and checks the booking status in My Bookings
- Shows the booking ID at the front desk on arrival, and cancels or rebooks if plans change

Understand the needs of the people who run the hotel and manage the platform behind the scenes: receptionists who handle guests and administrators who manage hotels, rooms, users and reports.

GOAL

- Keep room information accurate, serve arriving and departing guests quickly, and track bookings, payments and occupancy from one system.

What do they need to DO?

- Add and update hotels, rooms, room types, prices and room status (available, occupied, maintenance, inactive) • Record and search guest details, including ID proof, and link them to bookings
- Check guests in and out and update the room status
- View and filter all bookings by status, date or guest
- Verify payment status and record offline (counter) payments
- Monitor the dashboard and manage user accounts and roles (administrator)

What do they HEAR?

- Guests complain when a booked room is not ready or is double booked
- Owners ask for occupancy and revenue summaries • Front-desk colleagues say paper registers are slow at busy check-in times
- Guests ask about payment and refund status

What do they SAY?

- "I need to see which rooms are available, occupied or under maintenance."
- "Don't let a room with upcoming bookings be deleted." • "Let me find a guest's booking in seconds when they arrive."
- "Show me bookings, cancellations and revenue at a glance."

What do they THINK and FEEL?

PAINS

- Double booking and wrong room status
- Paper registers and scattered guest records
- Manually tracking payments and cancellations • Risk of unauthorised access to guest data
- Time-consuming report preparation

GAINS

- Room status updated on check-in and check-out • Rooms with active bookings protected from deletion
- Central guest records linked to bookings
- Role-based access for customer, staff and admin using JWT
- Dashboard showing bookings, occupancy, available rooms and revenue

What do they DO?

- Manages hotels, rooms, prices and room status
- Searches bookings and guest records on arrival
- Performs check-in and check-out and records the actual times
- Checks payments and recorded transactions
- Reviews dashboard statistics and manages users and roles
